

# Documents Component

The **Documents** component displays a section that contains a list of files. It allows users to download all files and download individual files.

## Import Statement

```
import Documents from './Documents';
```

## Props

Name	Type	Required	Description
data	object	yes	An object containing the user's documents data.

## Example

This example shows how the Documents Component can be used to display user's documents in a dashboard. It also allows the functionality to download a single or all documents.

```
import React from 'react';
import Documents from './Documents';

const Data = {
  documents: [
    {
      title: "GST Certificate",
      fileName: "GST Certificate.pdf",
      size: "9 MB",
    }
  ]
}
```

```
    ]
  }

  const downloadAllFiles = () => {
    console.log("downloading all files...")
  }

  const downloadFile = (Id) => {
    console.log("downloading all files...")
  }

  function App() {
    return (
      <div>
        <Documents data={Data} />
      </div>
    );
  }

  export default App;
```
